Install MongoDB Community Edition on Windows

On this page

- System Requirements
- Considerations
- Install MongoDB Community Edition
- Start MongoDB Community Edition from the Command Interpreter
- Start MongoDB Community Edition as a Windows Service
- Stop MongoDB Community Edition as a Windows Service
- Remove MongoDB Community Edition as a Windows Service
- Additional Resources

Use this tutorial to install MongoDB Community Edition 4.0 on Windows hosts.

NOTE:

To install a different version of MongoDB, please refer to that version's documentation. To install the previous version, see the tutorial for version 3.6 [↗](#).

System Requirements

Hardware Requirements

MongoDB Community Edition requires an x86 64-bit architecture. See [Supported Platforms](#) for more information.

Software Requirements

Install on Windows 7 / Server 2008 R2 or Later
